Making a Bubble Blower

You can make a great bubble blower from a wire clothes hanger.

Untwist the wire hanger and then wrap a piece of it around the can or thick crayon. Slip the can out. Leave about 4 inches (10 cm) of straight wire for a handle. Then bend the rest of the wire back and forth until it snaps. And now you have your bubble wand. Dip the wand into the bubble mix and wave it in the air.

**What happens:** You get bubbles and more bubbles.

**Why:** By waving the soapy wand in the air you add the air that forms the center of each bubble.

**YOU NEED**

- uncoated wire clothes hanger
- circular object, like a frozen juice can or a thick crayon
- bubble mix
Other Bubble Blowers

You can make a bubble blower from almost anything: a drinking straw, a clay pipe, a tin horn, a funnel, a paper cup with the end removed, a juice can with both ends removed, even a cutaway plastic bottle.
