Bubble in a Bubble in a Bubble

Use a bubble stand to put a bubble in your bubble’s bubble.

**What to do:** Turn the plastic cup upside down and wet the bottom of it, which is now on top. Using the wire ring make a large bubble and attach it to the bubble stand.

Wet the plastic straw in the bubble mix and gently push it through the large bubble. Blow a smaller bubble inside the large one. Then carefully push the straw through the smaller bubble, and blow an even smaller one.

**What happens:** You get a bubble in a bubble in a bubble.

**Why:** Anything wet can penetrate the bubble without breaking it. The wet surface coming into contact with the soapy film becomes part of it. Do not touch the wet wall with your smaller bubble. If you do you will not get a separate bubble.
