Indicator Art
This is a creative way to introduce acids and bases. -Chris

Collect:

- 237 mL (1 cup) grape juice
- 118 mL (1/2 cup) vinegar
- 237 mL (1 cup) of water
- 30 mL (2 tbl) baking soda
- paintbrush
- 3 plastic cups
- white construction paper

1 Paint the paper with grape juice and let it dry - do this several times.
2 Mix baking soda and water - paint a design on the paper.

What makes me think?

What if you did this activity backwards? What else could work like the grape juice? Try painting with other liquids or solutions.
