Growing roots from different parts of plants
You need to get a box of sand and place it away from direct sunlight. Wet the sand thoroughly and keep it moist. Plant the following things in the sand:

1. Various bulbs.
2. Cuttings of begonia and geranium stems
3. A section of sugar cane stem with a joint buried in the sand.
4. A section of bamboo stem with a joint buried in the sand.
5. Carrot, radish and beet tops each with a small piece of root attached.
6. An onion.
7. An iris stem.
8. Pieces of potato containing eyes.
