RAW POWER

Wanna bet you can't stop a spinning egg?

THE SETUP
This trick requires raw power, so make sure you use an uncooked egg. Place it on its side on a table top and spin it vigorously. Stop the spinning egg but let go of it immediately. It will begin spinning again all by itself.

INSIDER INFORMATION
This is not a case of an egg with a memory! The spin on this trick is the liquid inside the egg. When you stopped the shell from moving, you didn’t stop the liquid. As soon as you released the shell, the moving liquid set the whole egg in motion again.
A hard-boiled egg with its solid contents acts as if it is all shell. When you stop it, it stays stopped.
