Wanna bet you can make fireworks with a lemon?

THE SETUP
You need a lighted candle for this trick, so be sure to have an adult nearby before you start. Cut a thin slice of rind off a lemon. Hold the outside of the rind near the flame and squeeze the inside surfaces together. You’ll see mini fireworks between the rind and the candle flame.

INSIDER INFORMATION
All oils are flammable, and lemon rind contains tiny pockets of oil. When the rind is squeezed, the skin breaks and tiny jets of oil squirt out. Lemon oil burns in a brief but bright sparkle when it is ignited.
